Summary

I am a full stack javascript developer specializing in the MEAN stack comprising of MongoDB, ExpressJs, AngularJs and NodeJs. I code full stack apps and solve problems using javascript. I also specialize on copying features from other websites and integrate in my own.

Skills

- Web Development: HTML, CSS, Javascript
- Frontend: jQuery, AngularJs, Ionic
- Backend: Node, Express, Socket.io, Mongoose
- Database: MySQL, SQLite, MongoDB
- Testing and task runners: Gulp, Mocha, Chai, Karma
- Other languages: C, C++, Java

Projects

Meme hub

9Gag clone — June 2016

Created a full stack app with full CRUD functionality in 10 days break. It is basically an image sharing app where you can post funny pictures and see other users post. You can also like, dislike and comment on other people's post.

Accomplishments

- Fully implemented user authentication.
- Used Amazon AWS S3 services to store static images.
- Used the full MEAN stack:
 - NodeJs and ExpressJs for the backend
 - MongoDB for database
 - AngularJs and HTML, CSS for the frontend.

Education

Coding House

Full stack Javascript — April 2016 - June 2016

Spent 14 weeks learning javascript web development using the MEAN stack. Build full stack CRUD applications using web design skills such as responsive layout, user management and social login and using cutting edge technologies like MongoDB, AngularJs, NodeJs, ExpressJs etc.

Southeast Missouri State University

Computer Science — 2011 - 2015
